NEXORA: Website Design Draft

Everything. Connected. Full design brief for the NEXORA platform, from brand to launch.

1. What NEXORA Is

NEXORA is an all-in-one digital platform that connects people to information, products, businesses, services and opportunities. It does not provide every service itself. It connects users to the sellers, employers, artisans, agents and organisations that can help them, so people can solve everyday problems without visiting eight different websites.

First market: Nigeria. **Design rule:** the brand, language and technology must be built so the platform can expand to other African countries and then internationally.

Three levels of ambition:

1. Information platform: people search, compare and discover.
2. Marketplace: people buy, sell, book, apply and transact.
3. Digital ecosystem: people manage many parts of everyday life through one account.

The design should support level 1 on day one, make level 2 easy to add, and leave room for level 3.

2. Brand and Visual Identity

Personality: confident, warm, trustworthy, modern. It should feel like a premium technology company that understands Nigerian daily life, not a generic classifieds site.

Tagline: Everything. Connected. **Homepage promise:** Everything you need. All in one place.

Colour palette

Name	Hex	Use
Midnight Navy	#0E1A3A	Header, hero, footer, main text on light
Deep Indigo	#26397F	Gradients, dark panels
Emerald	#0FB57F	Primary actions, success, verified badges, Market
Marigold	#FFB627	Highlights, key buttons, Jobs, Opportunities
Coral	#FF5C6C	Alerts, urgent reports, support button, Services
Sky Blue	#2E7BFF	Transport, links, Discover

Name	Hex	Use
Violet	#8A5CFF	Properties
Mist	#F3F6FB	Page background (light mode)
White	#FFFFFF	Cards

Each department owns one accent colour. Users learn the system quickly, and every page feels part of the same family.

Gradients: the hero uses navy to indigo with soft emerald and coral glows in the corners. The logo mark uses a circular blend of emerald, marigold and coral.

Dark mode: background #0A1230, cards #131E45, text #EEF2FF. Accent colours stay the same.

Typography

- **Headlines:** Bricolage Grotesque, bold or extra-bold, tight letter spacing. It gives the brand character.
- **Body and interface:** Figtree, regular and medium. It is clean and readable on small phone screens.
- **Scale:** hero headline 40–74px (fluid), section headings 28–42px, card titles 17–24px, body 15–17px, small labels 12–14px.
- Keep line lengths under about 70 characters.

Shape, spacing and imagery

- Rounded cards with 20–26px corners, pill-shaped buttons and tags.
- Soft shadows only on hover or floating elements. Generous spacing: 16–24px between elements, 56–80px between sections.
- Real photography of Nigerian people, markets, artisans, streets and homes. Avoid foreign stock images.
- One simple icon set with a consistent stroke. Emoji can be used as friendly department icons: 🛍️ Market, 💼 Jobs, 🔧 Services, 🚘 Transport, ⚡ Utilities, 🏠 Properties, 🌍 Community, 🏢 Business, 🎓 Opportunities, ✨ Discover.

Logo

The word NEXORA in bold geometric type, with a rounded-square mark made of a circular emerald, marigold and coral blend. It also works as a small app icon.

3. Global Layout

Top navigation bar (sticky)

- Left: logo.
- Centre (desktop): Departments, Community, For Business, Help.
- Right: location selector (for example "Abuja ▾"), Log in, and a gold "Join free" button.
- On mobile: logo, location chip and a menu icon. Navigation moves to the bottom bar.

Mobile bottom bar

Five items: Home, Search, Community, Saved, Account. Thumb-sized and always visible.

Footer

Navy background. Columns for Departments, Company, For Business, Help and Legal. Includes social links, language selector, app-coming-soon note and a line: "Everything. Connected."

Floating customer care button

A coral "Help" button fixed at the bottom-right of every page (see Section 9).

4. Homepage: Section by Section

4.1 Hero

- Navy-to-indigo gradient with soft emerald and coral glows.
- Headline (very large): **Everything. Connected.**
- Supporting line: Jobs, prices, artisans, homes, transport and your neighbourhood news. One search, one account.
- **Search bar** (white, rounded, floating above the gradient): placeholder "Search jobs, products, services, businesses and more…".
- Under the bar: category chips (All, Market, Jobs, Services, Transport, Utilities, Properties). Tapping a chip narrows the search.
- **Live results:** as the user types, up to four result cards appear under the bar with name, short detail and price or action. This is the memorable first moment: the platform proves itself before the user scrolls.
- Small stat row: 10 departments, 1 account, local results in every state, free job search.

4.2 Trust strip

A thin band under the hero with four short items: Verified businesses, Moderated reviews, Timestamped community reports, Free essential information.

4.3 Departments grid

Heading: **Ten departments. One home screen.** Two tiles per row on phones, five per row on desktop. Each tile has the icon, department name, one-line promise, and a soft coloured circle in the corner. Hover lifts the tile slightly. Tapping opens the department.

4.4 Near you

Shows content for the user's selected state:

- Jobs in your state.
- Popular products from nearby sellers.
- Businesses near you. If no location is chosen, a gentle prompt asks the user to pick their state.

4.5 Latest community reports

Three cards (for example flooded road, power outage, water restored) with icon, place, time posted, number of confirmations and a **Confirm** button. A "See all reports" link goes to Community.

4.6 Featured services and trending products

Two horizontal swipe carousels with provider or product cards. Clearly marked "Sponsored" where paid.

4.7 Opportunities

Cards for scholarships, grants and training programmes with a deadline badge such as "Closes in 12 days" and a "Verified source" tick.

4.8 Business call-to-action

Heading: **Give your business a storefront.** Text: no website needed, add products, photos, offers and receive customer enquiries. Button: List your business free.

4.9 How NEXORA grows

A simple six-step roadmap graphic (Launch, Nigerian user base, Payments and bookings, Africa, Mobile app, International). This section is the only place where numbered steps are used, because it is a real sequence.

5. The Ten Departments

All department pages share one structure so people only learn it once:

- Coloured header band in the department accent colour with title, promise and a search bar.
- Filter row: location, price, rating, verified only. On mobile, filters open in a bottom drawer.
- Results as cards: photo, title, price or key detail, location, rating, verified badge, and Save and Contact buttons.
- A "Report" option on every listing.
- Helpful empty states, for example "No electricians in this area yet. Invite one to join."

5.1 NEXORA Market (Shop smarter. Spend better.)

Purpose: compare prices and discover products. **Features:** foodstuff price comparison, electronics, household products, building materials, sellers' pages, discounts and promotions, contact sellers, price tracking. **Key screens:**

- *Search results:* grid of products with lowest price highlighted.
- *Compare view:* sellers side by side showing price, condition (new, used), location, rating and a Contact button. Example: iPhone 15 from several sellers.
- *Price history:* a line chart with a "Track this price" button that sends alerts.
- *Food prices:* a simple list view (rice, beans, garri, oil) with changes since last week, shown as up or down arrows.

5.2 NEXORA Jobs (Your next opportunity starts here.)

Purpose: make finding legitimate employment easier. This is likely the most important department. **Features:** government, private, remote, graduate trainee, internship, part-time, full-time and international roles; search by location; filters for qualification and salary; CV upload and management; saved jobs; notifications; applying through the employer's own application channel. **Key screens:**

- *Job list:* title, employer, location, type, salary range, posted date, "Verified employer" badge.

- *Job detail:* description, requirements, how to apply, save button, report button.
- *CV builder:* guided steps (personal details, education, experience, skills) with a preview and download.
- *Job alerts:* choose role, location and frequency.
- Anti-fraud notice on every listing explaining that real employers never ask for payment.

5.3 NEXORA Services (Find trusted people to get things done.)

Purpose: find reliable providers. **Providers:** electricians, plumbers, mechanics, carpenters, painters, cleaners, AC technicians, computer technicians, graphic designers, professional consultants. **Key screens:**

- *Provider list:* photo, name, trade, area, rating, estimated price range.
- *Provider profile:* about, photos of past work, reviews, price estimates, availability, and Call, Message and Book buttons.
- *Booking:* choose date and time, describe the job, confirm. In-platform payment is added later.
- *Compare:* choose two or three providers and view side by side.

5.4 NEXORA Transport (Know your options before travelling.)

Purpose: compare transport options and plan journeys. **Features:** fare comparison, interstate routes, transport companies, departure locations, estimated durations, booking options, traffic updates. **Key screens:**

- *Route search:* From, To, date. Example: Abuja to Lagos.
- *Results:* company cards with reported fare, departure park, estimated duration and a Book or Contact button. Fares are labelled "reported" so users understand they may change.
- *Company page:* routes, parks, contacts and reviews.
- *Traffic updates:* a feed of user-shared updates with timestamps.

5.5 NEXORA Utilities (Know what's happening around you.)

Four tabs in one department:

- **Electricity Watch:** report outages and restoration, neighbourhood updates, supply patterns.
- **Water Watch:** report shortages, find water suppliers, community updates.
- **Fuel Watch:** report fuel prices and availability, compare reported prices across locations.

- **Waste Management:** find collection services, request collection, report illegal dumping. **Key screens:** a map with coloured pins (coral for outage, blue for water, gold for fuel), a quick-report button, and a feed of recent reports with timestamps and confirmations.

5.6 NEXORA Properties (Find your next home.)

Purpose: find homes, land and commercial spaces. **Features:** rent, sale, land, commercial listings; verified agents; photos; location; rent price comparison. **Key screens:**

- *Search:* location, type, bedrooms, price range, and a map toggle.
- *Listing page:* photo gallery, price, description, map, agent profile with "Verified agent" badge, "Report listing" button.
- *Rent comparison:* average rent for similar properties in the area.
- Fraud warnings near contact buttons, for example "Never pay before viewing."

5.7 NEXORA Community (Your community, your voice.)

Purpose: let users share what is happening around them. **Report types:** bad roads, flooding, electricity problems, water shortages, environmental problems, public infrastructure issues. **Key screens:**

- *Report feed and map:* every report has a photo (optional), place, category, timestamp and a confirmation count.
- *Report form:* choose category, add location, add photo, add a short note, submit.
- *Confirm and update:* other users tap Confirm or add an update (for example "Water has dropped"). Old reports fade or are marked "Resolved".
- *Alerts:* optional notifications for the user's area.

5.8 NEXORA Business (Give your business visibility.)

Purpose: a digital storefront for entrepreneurs, companies and small businesses. **Public business page:** logo and cover image, description, products or services, photos, contact information, special offers, customer reviews, an enquiry form, and a verified badge when approved. **Business dashboard:** see Section 7.

5.9 NEXORA Opportunities (Discover ways to grow.)

Includes: scholarships, grants, fellowships, entrepreneurship programmes, training, apprenticeships, competitions, business funding. **Key screens:** list with filters (type, country, level), and a detail page showing the verified source, eligibility requirements, deadline countdown, how to apply and a save button. Every listing must show eligibility and deadline clearly.

5.10 NEXORA Discover (Discover what's available.)

Purpose: a browsing page for people without a specific search. **Contains:** new businesses, popular products, trending services, new jobs, community updates, discounts and useful announcements, arranged as swipeable rows with a personalised "For you" section when the user is signed in.

6. User Accounts and Dashboard

One account for every department. Sign up with phone number or email. Phone signup with a one-time code should be the default because it is the most familiar method for many users.

Onboarding (three quick steps):

1. Choose your state and area.
2. Choose interests (jobs, shopping, services, property, opportunities).
3. Optional: upload a CV or turn on alerts.

Dashboard tabs:

- **Saved:** jobs, products, businesses, favourite providers.
- **Recent searches.**
- **Notifications:** job alerts, price changes, community alerts, replies.
- **Messages and enquiries.**
- **Profile:** name, photo, CV, location, preferences, privacy settings.

Personalisation: results are ordered by the user's location and interests. Someone in Abuja sees Abuja jobs, businesses and services first.

7. Business Dashboard

- **Profile editor:** logo, cover, description, categories, opening hours, location.
- **Products and services manager:** add items with photos, prices and descriptions.
- **Offers:** create special promotions with start and end dates.
- **Enquiries inbox:** customer messages with quick replies.
- **Reviews:** read and reply to reviews.
- **Verification:** upload documents to earn the verified badge.
- **Promote:** buy advertising, premium listings or featured job posts.
- **Plans and billing:** subscriptions and invoices.
- **Simple analytics:** profile views, clicks, enquiries.

Business types supported from day one: sellers, plumbers and other artisans, transport companies, recruiters and employers, property agents.

8. Trust and Safety Design

Trust is the most important quality of the platform. It must be visible in the design, not hidden in policy pages.

- **Verified badges** for businesses, agents and employers, with a tap-to-explain tooltip.
- **Moderated reviews** with clear rules and a reporting option.
- **Timestamps** on every community report and price report ("Reported 10 minutes ago").
- **Report buttons** on every listing, job, review and user.
- **Anti-fraud guidance** shown in context: no payment for jobs, never pay before viewing a property, meet sellers in safe places.
- **Sponsored labels** on every paid placement.
- **Fake listing handling:** reported items are hidden for review and repeat offenders are removed.

9. Customer Care and Support

Floating Help button

Coral, rounded, bottom-right on every page, labelled "Help". On mobile it sits above the bottom navigation bar.

Chat window

- Opens as a card above the button (full width on small phones).
- Header: "NEXORA Care" with a green "Online" indicator and a close button.
- First message: "Hi, I'm NEXORA Care. What can I help with?"
- **Quick topics (tappable chips):** What is NEXORA?, Is it free?, Report a problem, List my business, Report a fake listing, Payments, Talk to a person.
- A text box with a Send button for typed questions.

How support works

1. A chatbot answers common questions instantly (what NEXORA is, pricing, how to post a job, how to list a business, how to report fraud).

2. When the bot cannot answer, or the user taps "Talk to a person", the chat is passed to a human agent.
3. Agents reply in chat, by phone or by WhatsApp, which many Nigerian users already use daily.
4. Every conversation gets a ticket number the user can see in their dashboard.
5. After the chat ends, the user can rate the help with a thumbs up or down.

Help Centre

A searchable page with categories (Account, Jobs, Market, Services, Business, Safety, Payments), short step-by-step articles, and a contact form. Support hours and expected response times are stated clearly.

10. Interactions and Motion

- **Live search results** as the user types.
- **Department tiles** lift slightly on hover and show a coloured outline when selected.
- **Confirm button** on reports changes to "Confirmed" and the count goes up.
- **Save buttons** fill with colour and show a small confirmation.
- **Skeleton loaders** (grey placeholder shapes) instead of spinners.
- **One orchestrated entrance** on the hero when the page first loads. Avoid animating every section.
- Respect the device's reduced-motion setting.

11. Mobile-First Rules

- Design phone screens first, then enlarge for tablet and desktop.
- Buttons at least 44px tall. Primary actions within thumb reach.
- Bottom navigation bar and bottom drawers for filters.
- Light pages and compressed images. Offer a data-saver mode that loads fewer images.
- Prices in naira (₦). Support English first, with space for Pidgin, Hausa, Yoruba and Igbo later.

12. Accessibility

- Text contrast that meets WCAG AA.
- Visible keyboard focus on every control.

- Labels on all form fields and icons.
- Do not rely on colour alone: pair coloured pins and badges with icons or text.
- Readable font sizes and layouts that survive zooming.

13. Revenue and Where It Appears in the Design

Revenue stream	Where users see it
Advertising	Sponsored cards and banners, always labelled
Premium listings	Highlighted listings at the top of results
Job advertisements	Featured vacancies
Business subscriptions	Dashboard plans and extra tools
Booking commissions	Booking flow on Services and Transport
Marketplace commissions	Qualifying Market transactions
Premium user services	Optional advanced features such as extra alerts

Rule: basic information and job searching stay free. The platform must remain useful to people who cannot afford subscriptions.

14. Launch Plan and Expansion

Stage	Focus
1	Launch with core services
2	Build a strong Nigerian user base
3	Add payments, bookings and integrations
4	Expand across African markets
5	Launch the NEXORA mobile app
6	Expand internationally

Launch priority: Jobs, Market, Services, Business and Community first. Properties, Transport, Utilities, Opportunities and Discover follow as partnerships, reliable data and user numbers allow. Unlaunched departments can appear as "Coming soon" tiles with a notify-me button.

15. Build Checklist

1. Confirm brand: name, logo, palette, fonts.
2. Design homepage, department template, listing card, profile page and dashboard on mobile first.
3. Build account system (phone and email signup, state selection).
4. Build search and location-based results.
5. Build Jobs, Market, Services, Business and Community.
6. Add verification, reviews, reporting and moderation tools.
7. Add customer care chat, help centre and ticketing.
8. Test on low-end phones and slow connections.
9. Soft launch in one or two states, then widen.
10. Review feedback and add the next department.

The vision to protect throughout development: NEXORA should not only help people find information. It should help them do something with that information.
